

Soft-AID Computers (P) Ltd

LiBSUITE-KM[®]

In this era of information age, organizations have recognized the value of intellectual capital and consider it as their prime asset. Success for all of us depends on effective deployment of this asset.

Intellectual capital is created through human endeavor and therefore building knowledge repositories around this activity is extremely difficult through conventional storage and retrieval methods. The process of building a knowledge base gets further complicated due to the very nature of human knowledge, which can exist in tacit (hidden) as well as explicit (codified) form.

LiBSUITE-KM[®] is software solution that helps organizations to retain, build, share and protect their knowledge base and deploy it at an enterprise level. It is a web enabled application that can be accessed by all users in an enterprise during their decision making process. The application is designed in such a manner that it promotes building and sharing of organizations knowledge base on a continual basis.

Modules & Subsystems :

- Document Repository
- Search Engine
- Collaborative Tool
- Tacit Knowledge Mobilization
- Dynamic Database Interface

Document Repository

Documents are the main source of knowledge in any organization. Today most of the documents are available in Soft or Electronic formats. The documents are mostly created through popular packages like MS Word, Excel etc. Specific industries like Automobile may have knowledge created through Engineering drawings, Images, Maps etc. One more popular and efficient way of storing information is through PDF files.

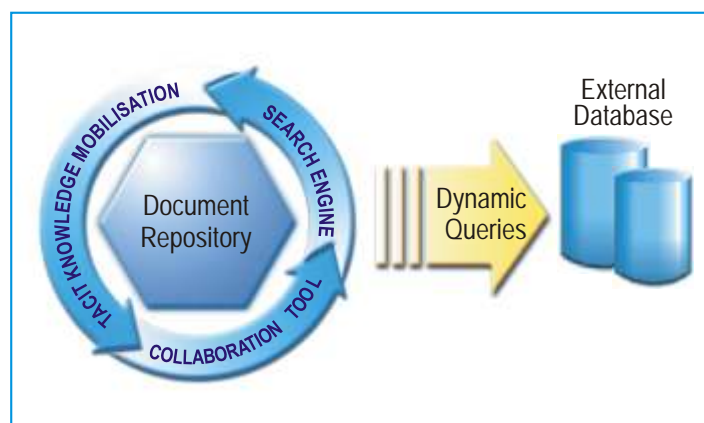

Normally apart from the final documentation, which is published, there are many supporting documents produced. Though these documents have tremendous knowledge in them, these documents are normally lost or they are normally not found when they are needed the most.

LiBSUITE- KM provides a facility to upload final and partial documents on a server. It provides a facility to create a bibliographic record and maintain effective control over the versions, editions, revisions etc.

Access rights can be assigned to users to ensure proper data-integrity and control over the knowledge base.

Some of the unique features it provides are :

- Document can be Uploaded & Published
- Access rights can be set
- Revisions & Editions can be managed
- Keywords & Abstracts can be attached
- Content Indicators, User Levels, Types of Documents can be set

All Registered Trade Marks are Acknowledged.

Search Engine

LiBSUITE-KM offers information to users using Pull & Push techniques, eg. it offers searches like Simple Search where you can search for a specific word or phrase, Boolean Search that allows you to search using operators like AND, OR etc. and Hierarchal Search helps in exploring data in a hierarchal manner.

With LiBSUITE-KM, User Profiles can be set and users can be fed with information, which is of specific interest to them.

LiBSUITE-KM allows users to access information available in various databases and platforms by creating connection strings to these databases. The Software provides a web based search engine for:

- Simple Search
- Advanced Search
- Boolean Search
- Hierarchal Search
- Latest Uploads
- Suggested Documents
- Search Expert
- Dynamic Query
- Selective Dissemination of Information (SDI)

Collaborative Tool

LiBSUITE-KM enables users to collaborate with each other at an enterprise level for problem solving. It enables users to post questions on a web enabled knowledge platform, set-up discussion groups and evaluate various solutions in and inter-active manner within the enterprise.

Tacit Knowledge Mobilization

LiBSUITE-KM offers many powerful ways for Knowledge Mobilization.

It offers a web interface for adding knowledge snippets, keywords, and abstract to the knowledge repository. It also offers a provision to recommend a document to a user and gives the user rights to evaluate the documents and rank them.

Benefits of using LiBSUITE-KM®

- Provides a common platform to retain, share and protect Organization's knowledge base.
- Provides quick access to Organization's knowledge base through a dedicated web based search engine.
- Enables deployment of Organization's knowledge base across the enterprise.
- Allows selective dissemination of Organization's knowledge base.
- Enables users to search (web based) for a subject expert within the organization.
